Public Health in the Megacity: Air Quality and Public Health in Mexico City

Tuesday, February 24, 2015
5:30 - 7:00 PM
Building I, 1302

Please join us for a talk on the Mexico City-HSPH Alliance for Air Quality and Health by Prof. Douglas Dockery, Chair of the Department of Environmental Health.

In 1992, the World Health Organization declared Mexico City the most polluted city in the world. Since then, this megacity has made remarkable strides in cleaning up its air. This research collaboration will explore health benefits and conduct policy and economic valuation associated with air quality improvements in this megacity.

Prof. Dockery will present an overview of the project, student research and travel opportunities, and discuss the launch of the Mexico City Public Health Working Group.

Refreshments will be served
